

# Guidelines for Submitting Digital Files for the *PSA Journal*

- When submitting images for offset printing, uncompressed TIFF files are preferred. Submit ten or more images, both horizontal and vertical.
- Digital files to the *PSA Journal* must be converted from RGB (color space used by digital cameras) to CMYK.
- File Names: Do not use punctuation or symbols. Use files names that help identify the image. Do not duplicate the name.

**Example:** McTigheHorse1.tif, where McTighe is your last name and horse is your article subject, and (1) is the picture number.

- Resolution: The offset-printing standard is 300 dpi. All files submitted for publication in the *PSA Journal* must be 300 dpi. (ppi)
- Do not over-sharpen your image at any stage.
- The files may be submitted on a CD as these will be large files.
